

KlatchUp

App User Flow Documentation

A complete walkthrough of the KlatchUp mobile application — from onboarding through venue-based social matching, real-time chat, and profile management.

Version	1.0 — March 2026
Platform	iOS (Figma Prototype)
Audience	Clients · Developers · Investors
Screens	21 unique screens documented

Table of Contents

01	Authentication & Login Phone verification and OTP entry
02	User Onboarding Profile setup — name, gender, city, interests, photo, bio
03	Home & Venue Discovery Main screen and nearby venue check-in
04	People Discovery & Matching Browse profiles, view details, send KlatchUp requests
05	Active Session & Chat Matched venue sessions and real-time messaging
06	KlatchUp Requests Incoming connection requests management
07	Profile & Settings Profile editing, settings, and support
08	Technical Architecture Backend logic, APIs, and system design notes

01 Authentication & Login

Users begin by entering their phone number with country code. An OTP is sent via SMS for secure, passwordless authentication. The process is quick and frictionless.

1

Enter Phone Number

The user enters their mobile number with a country code selector (+91 for India). A prominent "Get OTP" button triggers the verification flow.

Phone Entry

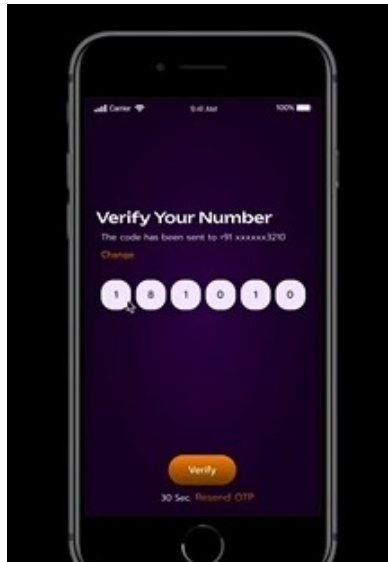

Technical Note: POST /api/auth/send-otp · Rate-limited to prevent abuse · SMS gateway integration (e.g., Twilio / MSG91)

2

OTP Verification

A 5-digit code is sent to the user's phone. The screen shows a masked number for privacy, a 30-second countdown timer, and a "Resend OTP" option. Users can also change their number.

OTP Verification

Technical Note: POST /api/auth/verify-otp · JWT token issued on success · OTP expires after 5 min · Max 3 retries

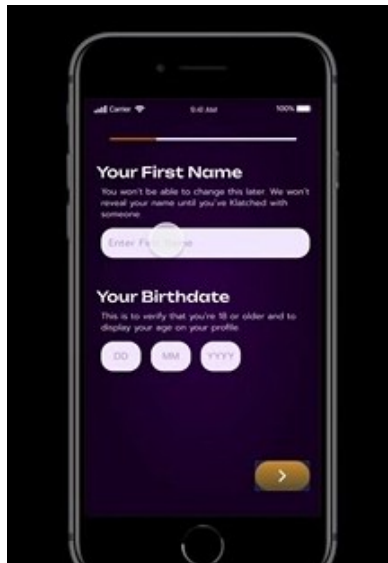

02 User Onboarding

New users are guided through a multi-step onboarding flow to build their profile. Each step collects essential information — name, age, gender, location, interests, photos, and a personal bio. The name is locked after setup to maintain authenticity.

3

Name & Birthdate

The user enters their first name (cannot be changed later for trust). Birthdate is collected via DD / MM / YYYY fields to verify the user is 18+ and display their age on their profile.

Name & Birthdate

Technical Note: Age verification enforced server-side · Name immutability for identity trust · GDPR-compliant data storage

4

Gender Identity & City

Users select their gender identity from four options: Woman, Man, Non-binary, or Not mentioned. They also choose their city from a dropdown — this determines which venues appear nearby.

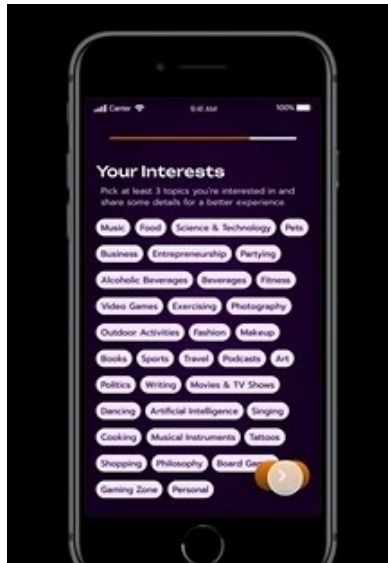

Gender & City

Technical Note: Gender used for matching preferences · City maps to venue geo-clusters · Expandable to multi-city later

5

Interest Selection

Users pick at least 3 interests from a rich tag cloud of 30+ categories — Music, Science & Technology, Entrepreneurship, Fitness, Travel, Photography, Art, Gaming, and more. These power the matching algorithm.

Interest Tags

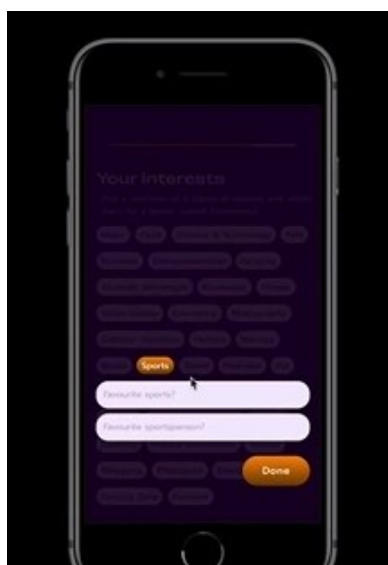

Technical Note: Interest tags stored as array · Minimum 3 enforced client-side · Used for compatibility scoring

6

Interest Deep-Dive

When a user taps on certain interests (e.g., Sports), a detail panel slides up asking for specifics — favourite sports, favourite sportsperson. This enriches the matching data and gives conversation starters.

Interest Details

Technical Note: Sub-interest expansion via modal · Optional but improves match quality · Stored as nested interest objects

7

Profile Picture & Bio

Users upload a profile photo (can be changed later) and write a short bio. The copy reassures users: "The first impression matters. No pressure, just be yourself!" A "Continue" button completes onboarding.

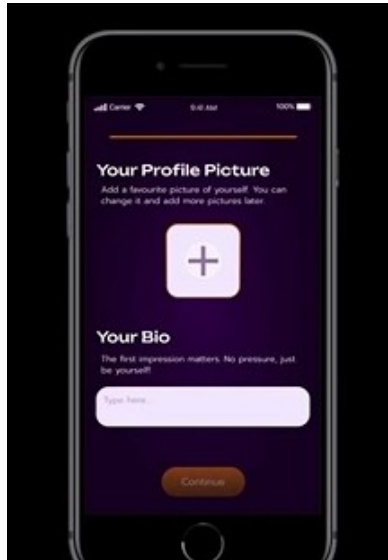

Photo & Bio

Technical Note: Image upload to cloud storage (S3/GCS) · Bio text max ~200 chars · Moderation pipeline for photos

03 Home & Venue Discovery

The home screen is the heart of KlatchUp. It features the signature K-logo button that users tap to find nearby cafes, bars, and restaurants. The app is built around real-world social experiences — you connect with people who are physically nearby.

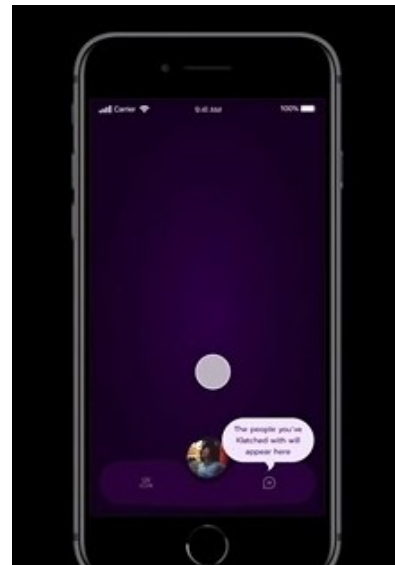

8

Home Screen

A clean, branded home screen greets the user with "Hi Name!" and the central KlatchUp logo button. A tooltip reads: "Tap this button to find the cafe, bar, club or restaurant you're at." A bottom nav bar provides access to profile and matches. Notification bell icon at top-right.

Home Screen

With Tooltips

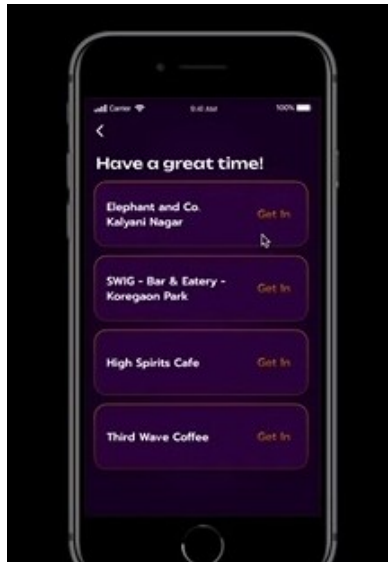

Technical Note: GET /api/user/profile · WebSocket for real-time notifications · Location services required

9

Venue Selection

After tapping the KlatchUp button, a list of nearby venues appears — e.g., "Elephant and Co, Kalyani Nagar", "SWIG - Bar & Eatery - Koregaon Park", "High Spirits Cafe", "Third Wave Coffee". Each venue has a "Get In" button. The header says "Have a great time!"

Venue List

Technical Note: GET /api/venues/nearby?lat=X&lng=Y · Geofencing via GPS · Venue data via Google Places / partner API

04 People Discovery & Matching

Once checked into a venue, users can browse other people at the same location. Profile cards show photos, age, bio, interests, education, and work. The "Swipe to KlatchUp" action sends a connection request.

10 Profile Card — Browse

Full-screen profile cards display the user's photo, age (e.g., 29), and a detailed bio. A "Swipe To KlatchUp" slider at the bottom lets users express interest. The card is scrollable to reveal more details.

Profile Card (Top)

Profile Card (Details)

Technical Note: GET /api/venue/{id}/people · Card stack with swipe gestures · Lazy-loading images for performance

11 Send KlatchUp Request

Swiping the slider triggers a connection request. The button changes to "Requested" (with a checkmark). The profile card shows shared interests with checkboxes — Sports, Movie, Fitness, Science & Technology. Education and Work details are also visible.

Request Sent

Technical Note: POST /api/klatchup/request · Push notification sent to recipient · Mutual match triggers chat unlock

12

People at Venue

A list view shows all people checked into the same venue, each with their interest tags (Science & Technology, Fitness, Musical Instruments, Sports, Movie & TV Show). A "Leave" option lets the user exit the venue session.

Venue People List

Technical Note: Real-time presence via WebSocket · Interest overlap highlighted · Leave triggers cleanup

05 Active Session & Chat

When a KlatchUp request is accepted, both users enter an active session. The home screen updates to show the active venue and matched user. Real-time chat becomes available for matched users.

13 Active Session — Home

The home screen now shows an active session banner: "High Spirits Cafe" with an "Active" badge and a "View" link. The matched user's avatar appears on the screen. This is the user's hub while checked into a venue.

Active Session

Technical Note: Session state managed via WebSocket · Auto-expires based on venue rules · GET /api/sessions/active

14 Real-Time Chat

A simple, clean chat interface with message bubbles (purple for received, dark for sent). Shows the matched user's name and avatar (e.g., "Wade"). Messages include timestamps. A text input with send button at the bottom.

Chat (Ongoing)

Chat (New Match)

Technical Note: WebSocket-based messaging · Message persistence in DB · Typing indicators · Media sharing (future)

06 KlatchUp Requests

15

Incoming Requests

Users can view all pending KlatchUp requests sent to them. Each request card shows the sender's photo, their shared interest tags, and Accept/Ignore buttons. Accepting unlocks the chat channel. Multiple requests can be managed in a scrollable list.

KlatchUp Requests

Technical Note: GET /api/klatchup/requests · Accept → POST /api/klatchup/accept · Push notification on accept

16

Chats List

All matched conversations appear in a unified chats list. Each row shows the user's avatar, name (e.g., Jane Cooper, Wade Warren, Esther Howard, Jenny Wilson), preview text ("Start a conversation..."), and timestamp. Bottom nav provides quick access.

Chats List

Technical Note: GET /api/chats · Sorted by last activity · Unread badge support · Pagination for scalability

07 Profile & Settings

17

Your Profile

The profile screen displays the user's photo, name, age ("Name, 29"), additional photo slots (3 more), bio text, and editable interest tags. A settings gear icon at top-right provides access to account settings. Users can edit their bio and interests at any time.

Your Profile

Technical Note: GET/PUT /api/user/profile · Photo upload with compression · Interest edit with re-scoring

18

Report a Problem

A support screen where users can report issues via email. Clean, minimal interface with a sub-heading and email input field. Accessible from the settings/profile area.

Report a Problem

Technical Note: POST /api/support/report · Email notification to support team · Ticket tracking integration

08 Technical Architecture Overview

System Components

Component	Technology (Suggested)	Purpose
Mobile App	React Native / Flutter	Cross-platform iOS & Android client
API Gateway	Node.js / FastAPI	RESTful API + WebSocket server
Auth Service	Firebase Auth / Custom JWT	OTP verification, token management
Database	PostgreSQL + Redis	User data, sessions, cache layer
Messaging	WebSocket + Message Queue	Real-time chat, notifications
File Storage	AWS S3 / GCS	Profile photos, media assets
Location	Google Places API	Venue discovery, geofencing
Push Notifications	FCM / APNs	KlatchUp requests, chat alerts

Key API Endpoints

Method	Endpoint	Description
POST	/api/auth/send-otp	Send OTP to phone
POST	/api/auth/verify-otp	Verify OTP, return JWT
GET/PUT	/api/user/profile	Get or update user profile
GET	/api/venues/nearby	List venues by geolocation
POST	/api/venues/{id}/checkin	Check into a venue
GET	/api/venue/{id}/people	List people at venue
POST	/api/klatchup/request	Send KlatchUp request
POST	/api/klatchup/accept	Accept a request
GET	/api/chats	List all chat threads
WS	/ws/chat/{thread_id}	Real-time messaging

Matching Algorithm — How It Works

KlatchUp's matching is based on three core signals, combined to produce a compatibility score:

Signal	Weight	Logic
Shared Interests	50%	Jaccard similarity on interest tags; sub-interest overlap adds bonus
Physical Proximity	30%	Must be at same venue (binary gate); closer = higher score
Activity Recency	20%	Users who checked in recently ranked higher; decay over time
